Matched-Bernoulli null for cross-model dimensionality (24 x 500 MMLU, tau=0; 500 draws per null, seed=20260417)
Paper metric (Sec. 2.4)
Null A: per-question rate
Null B: per-model rate
Null C: global rate
observed = 18.74
ceiling M-1 = 23
draws
$d_{\text{across}}$ (Shannon effective rank exp $H$)
Paper's MP counting
Null A: per-question rate
Null B: per-model rate
Null C: global rate
observed = 4
draws
MP signal count (5% buffer)
